Maximum Marks	2 Marks

Customer Problem Statement Template

The following problem statements capture the difficulties faced by users who need personalized recommendations while staying within a fixed budget. They are written from the customer's point of view for the PocketSmart AI use cases.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A person furnishing or improving a home	plan furniture, lighting, fans and decor within a fixed budget	I must search many stores and manually compare many combinations	prices, quantities, style preferences and room requirements are spread across different sources	overwhelmed and unsure whether the final plan will remain within budget
PS-2	A person organizing a party or event	allocate my budget across venue, food, decor, entertainment and other services	I have to estimate each category separately and repeatedly recalculate totals	guest count, location and selected services change the best allocation	stressed and uncertain about overspending
PS-3	A shopper choosing jewelry for an occasion	find jewelry that matches my budget, occasion, preferences and outfit	normal search filters do not understand the complete styling context	color coordination, formality, metal and jewelry type need to be considered together	unsure whether the jewelry will match my outfit and budget
