

Brainstorming & Idea Prioritization Template

Date	2 October 2026
Team ID	SWTID-2026-6582
Project Name	PocketSmart AI: Your Smart Budget & Recommendation Assistant
Maximum Marks	4 Marks

Step 1: Team Gathering, Collaboration and Select the Problem Statement

The team selected the problem of fragmented, time-consuming budget planning across home interiors, events and jewelry styling. The goal was to create one AI-assisted system that understands user context, generates personalized recommendations and validates the final estimated cost against the user budget.

Step 2: Brainstorm, Idea Listing and Grouping

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Jeevanandham S (Team Leader)	Use Google Gemini to generate contextual recommendations for all three planners.	AI Integration	1
2	Jeevanandham S (Team Leader)	Use FastAPI with modular routers and services for a maintainable backend.	Backend	2
3	Jayavigneshwara A	Create a Home Interior Planner using budget, room counts, style and item requirements.	Feature	1
4	Jayavigneshwara A	Add deterministic Python calculations so AI-generated prices never control final arithmetic.	Reliability	4
5	Jeevapriyan S	Create a Party Planner using guest count, event type, location and selected services.	Feature	1
6	Jeevapriyan S	Generate platform search links for relevant marketplaces and service platforms.	Integration	3
7	Kaarthik Kishore G	Create a Jewelry Planner with optional outfit-image analysis using multimodal	Feature	1

		Gemini.		
8	Kaarthik Kishore G	Validate image type, file size and image integrity before AI processing.	Reliability	4
9	Kalaiselvan N	Add registration, login, dashboard and recommendation history.	User Experience	3
10	Kalaiselvan N	Use responsive Jinja2 templates, CSS and JavaScript for a clear web interface.	Frontend	3

Step 3: Idea Prioritization

Group No.	Final Idea	Feasibility	Importance	Priority	Selected
1	Core AI planners: Home, Party and Jewelry	High	High	Yes	Yes
2	Modular FastAPI backend and structured schemas	High	High	Yes	Yes
3	Authentication, history and responsive UI	High	High	Yes	Yes
4	Budget validation, image validation and error handling	High	High	Yes	Yes
5	Future live marketplace APIs and cloud-scale deployment	Medium	Medium	No	No

Outcome: Groups 1 to 4 form the implemented scope. Group 5 is retained as future enhancement because the current system uses estimated prices and generated search links rather than live merchant pricing APIs.
