Project Name	PocketSmart AI: Your Smart Budget & Recommendation Assistant
Maximum Marks	4 Marks

Customer Journey Map

Stage	User Goal	User Action	Pain Point	PocketSmart AI Opportunity
1. Discover	User needs help planning within a fixed budget.	Searches for a simpler planning approach.	Confusion from many options.	One unified assistant for multiple planning domains.
2. Enter	Opens PocketSmart AI and selects a planner.	Registers/logs in or continues to planner.	Unsure what inputs are needed.	Clear domain-specific forms.
3. Define Needs	Provides budget and preferences.	Enters room/event/style details; may upload outfit image.	Manual planning usually requires repeated comparison.	Structured input captures context in one place.
4. AI Processing	Wants relevant personalized options.	Submits form and waits for AI generation.	Concern about AI accuracy and arithmetic.	Gemini handles recommendations; Python validates totals.
5. Review	Checks suggested items/services and spending.	Reads cards, budget allocation and remaining savings.	Needs transparency on estimated pricing.	Estimated Price labels and clear budget breakdown.
6. Explore	Wants to find suggested products/services.	Opens generated platform search links.	No guaranteed live price/stock in current version.	Direct search links reduce manual query building.
7. Return	Wants to revisit earlier plans.	Uses dashboard/history when authenticated.	Losing previous recommendations.	Stored recommendation history.
