

Problem - Solution Fit

Date	2 October 2026
Team ID	SWTID-2026-6582
Project Name	PocketSmart AI: Your Smart Budget & Recommendation Assistant
Maximum Marks	2 Marks

Problem - Solution Fit Template

Canvas Area	PocketSmart AI
Customer Segments	Budget-conscious users planning home interiors, parties/events or jewelry purchases.
Problems	Fragmented searches; manual budget allocation; generic recommendations; repeated calculations; difficulty coordinating jewelry with an outfit.
Existing Alternatives	Separate marketplace searches, spreadsheets/calculators, event vendor searches, manual style matching and recommendations from friends.
Solution	PocketSmart AI combines Gemini-generated personalized plans with deterministic Python budget validation, multimodal jewelry analysis, search links and saved history.
Key Features	Home Planner; Party Planner; Jewelry Planner; optional outfit-image analysis; budget validation; authentication; dashboard/history; generated search links.
Value Proposition	One contextual assistant that converts a fixed budget and preferences into a structured, validated recommendation plan.
Evidence / Validation	Verified live Gemini calls for Home, Party and Jewelry; multimodal jewelry call verified; 21/21 automated tests passed.
Limitations	Prices are estimates, not live merchant prices; internet and Gemini quota are required; SQLite/local deployment is not intended for large-scale production.
