

Proposed Solution Template

Date	2 October 2026
Team ID	SWTID-2026-6582
Project Name	PocketSmart AI: Your Smart Budget & Recommendation Assistant
Maximum Marks	2 Marks

Proposed Solution Template

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Users spend significant time searching multiple platforms, comparing options and manually allocating a fixed budget for home interiors, events and jewelry styling.
2	Idea / Solution description	PocketSmart AI is a FastAPI web application that uses Google Gemini to generate personalized recommendations and a Python budget engine to independently validate all totals. It supports Home, Party and Jewelry planners, with optional multimodal outfit analysis for jewelry.
3	Novelty / Uniqueness	Combines three lifestyle planning domains in one system; separates AI creativity from deterministic financial validation; supports image-aware jewelry styling.
4	Social Impact / Customer Satisfaction	Reduces planning effort, improves budget awareness and gives users a clearer starting point for purchase/service exploration.
5	Business Model (Revenue Model)	Current academic prototype has no implemented revenue model. Potential future models include affiliate referrals or premium planning features, subject to platform policies.
6	Scalability of the Solution	Modular FastAPI services can be moved from SQLite/local deployment to managed databases, cloud hosting, caching and verified merchant APIs in future.
