

Testing & Evaluation

Date	2 October 2026
Team ID	SWTID-2026-6582
Project Name	PocketSmart AI: Your Smart Budget & Recommendation Assistant
Maximum Marks	Project Deliverable

Functional Testing

The project contains 21 automated tests across AI pipeline, authentication, budget, Home, Party, Jewelry and live end-to-end flows.

AI Output Validation

Tests verify that planners invoke Gemini and that output is parsed and budget-validated. Anti-fake tests ensure materially different party requirements do not blindly reuse fixed allocations.

Edge Case Testing

- Zero/negative budget handling.
- Over-budget detection.
- Invalid guest count.
- Invalid room/count limits.
- Fake or unsupported image rejection.
- Gemini failure without fake fallback.

Performance Testing

The verified full test run completed 21 tests in approximately 96.44 seconds, including live AI calls and end-to-end browser/server behavior. Individual AI latency varies with network and Gemini service conditions.

Output Quality Evaluation

Quality is evaluated for relevance, context sensitivity, structured parsing, budget adherence and multimodal coordination.

User Testing & Feedback

The live end-to-end test validates registration, login, Home, Party, Jewelry text, Jewelry multimodal, history, deletion and logout. No separate external participant survey was provided, so no unverified user-feedback claims are added.

Bug Fixing

The implementation includes explicit error paths, schema validation and budget-revision logic to address common AI and input failures.

Evaluation Metrics

Metric	Verified Result
Automated tests	21 passed / 21 total
Failed tests	0
Skipped tests	0
Gemini integration	Verified live
Multimodal Jewelry	Verified live
Budget validation	Verified by dedicated tests
